Susan, please see a few documents that summarize the data from the waste areas. We do not have a risk assessment; however, we do have organics that exceed 10-4. Out of all the areas investigated so far, the one of most concern is Tank 5. This area is in the resident's front yard, PAHs exceed 10-4, and the passive gas data indicate that there may be a potential vapor intrusion issue (actual indoor air taken at buildings onsite and near or over similar material did show exceedances of contaminant albeit just above the 10-6 screening number). [data characterization and WLC11-01—1807465]

Characterization data show the material to be non-hazardous. WLC06-01-1793843 and WLC07-01-1793844

TPH are high as well.

Phil Turner is the risk assessor.
